

## Swing GUI 기본(2)

---

JList  
JTable

# JList

## □ JList 형태와 Selection

- 예 : `setLayoutOrientation(JList.VERTICAL)`

HORIZONTAL\_WRAP

VERTICAL

VERTICAL\_WRAP

## □ Selection

- `ListSelectionModel`

SINGLE\_SELECTION

SINGLE\_INTERVAL\_SELECTION

MULTIPLE\_INTERVAL\_SELECTION  
default

# JList

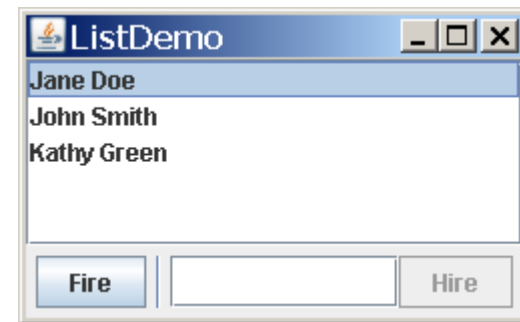

## □ JList의 모양설정

```
list = new JList(data); //data has type Object[]
list.setSelectionMode(ListSelectionModel.SINGLE_INTERVAL_SELECTION);
list.setLayoutOrientation(JList.HORIZONTAL_WRAP);
list.setVisibleRowCount(-1);
...
JScrollPane listScroller = new JScrollPane(list);
listScroller.setPreferredSize(new Dimension(250, 80));
```

## □ 데이터의 설정

```
listModel = new DefaultListModel();
listModel.addElement("Jane Doe");
listModel.addElement("John Smith");
listModel.addElement("Kathy Green");
```

```
list = new JList(listModel);
```

<http://docs.oracle.com/javase/tutorial/JWS/ui/swing/components/ex6/ListDemo.jnlp>

# JList

## □ ListSelectionListener

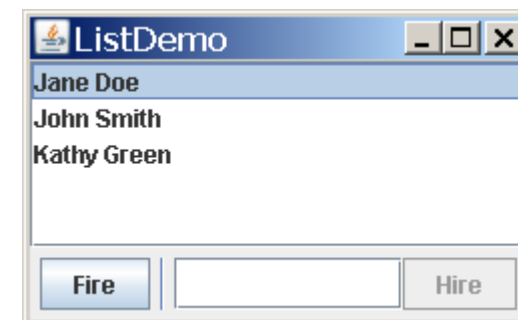

```
class Class 이름 implements ListSelectionListener {  
  
    public void valueChanged(ListSelectionEvent e) {  
        if (e.getValueIsAdjusting() == false) {  
  
            if (list.getSelectedIndex() == -1) {  
                //No selection, disable fire button.  
                fireButton.setEnabled(false);  
  
            } else {  
                //Selection, enable the fire button.  
                fireButton.setEnabled(true);  
            }  
        }  
    }  
}
```

<http://docs.oracle.com/javase/tutorial/uiswing/examples/components/ListDemoProject/src/components/ListDemo.java>

# JList

## □ 예 : Fire, Hire Listener

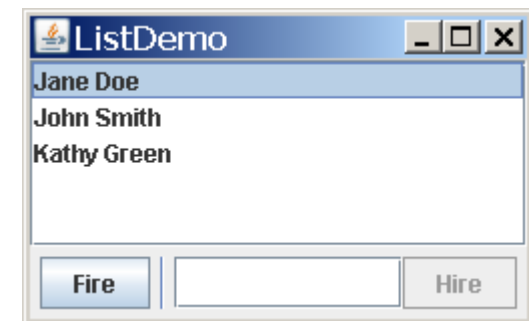

```
class FireListener implements ActionListener {
    public void actionPerformed(ActionEvent e) {
        //This method can be called only if
        //there's a valid selection
        //so go ahead and remove whatever's selected.
        int index = list.getSelectedIndex();
        listModel.remove(index);
        int size = listModel.getSize();
        if (size == 0) { //Nobody's left, disable firing.
            fireButton.setEnabled(false);
        } else { //Select an index.
            if (index == listModel.getSize()) {
                //removed item in last position
                index--;
            }
            list.setSelectedIndex(index);
            list.ensureIndexIsVisible(index);
        }
    }
}
```

## Il list

```
class HireListener implements ActionListener, DocumentListener {
    private boolean alreadyEnabled = false;
    private JButton button;
    public HireListener(JButton button) {
        this.button = button;
    }
    //Required by ActionListener.
    public void actionPerformed(ActionEvent e) {
        String name = employeeName.getText();
        //User didn't type in a unique name...
        if (name.equals("") || alreadyInList(name)) {
            Toolkit.getDefaultToolkit().beep();
            employeeName.requestFocusInWindow();
            employeeName.selectAll();
            return;
        }
        int index = list.getSelectedIndex(); //get selected index
        if (index == -1) { //no selection, so insert at beginning
            index = 0;
        } else { //add after the selected item
            index++;
        }
        listModel.insertElementAt(employeeName.getText(), index);
        //If we just wanted to add to the end, we'd do this:
        //listModel.addElement(employeeName.getText());
        //Reset the text field.
        employeeName.requestFocusInWindow();
        employeeName.setText("");
        //Select the new item and make it visible.
        list.setSelectedIndex(index);
        list.ensureIndexIsVisible(index);
    }
} 1
```

Hire

# JTable

## □ 모양과 데이터

The Header contains Column labels

First Name	Last Name	Sport	# of Years	Vegetarian
Kathy	Smith	Snowboarding	5	<input type="checkbox"/>
John	Doe	Rowing	3	<input checked="" type="checkbox"/>
Sue	Black	Knitting	2	<input type="checkbox"/>
Jane	White	Speed reading	20	<input checked="" type="checkbox"/>
Joe	Brown	Swimming	10	<input type="checkbox"/>

Each Cell displays a data item

Each Column displays one type of data

```
String[] columnNames = {"First Name",  
"Last Name", "Sport", "# of Years",  
"Vegetarian"};
```

```
Object[][] data = {  
    {"Kathy", "Smith",  
     "Snowboarding", new Integer(5), new Boolean(false)},  
    {"John", "Doe",  
     "Rowing", new Integer(3), new Boolean(true)},  
    {"Sue", "Black",  
     "Knitting", new Integer(2), new Boolean(false)},  
    {"Jane", "White",  
     "Speed reading", new Integer(20), new Boolean(true)},  
    {"Joe", "Brown",  
     "Pool", new Integer(10), new Boolean(false)}  
};
```

```
JTable table = new JTable(data, columnNames);
```

# JTable

## □ Container에 Table 넣기

```
JScrollPane scrollPane = new JScrollPane(table);  
table.setFillViewportHeight(true);
```

## □ Table Column Width 설정

```
TableColumn column = null;  
for (int i = 0; i < 5; i++) {  
    column = table.getColumnModel().getColumn(i);  
    if (i == 2) {  
        column.setPreferredWidth(100); //third column is bigger  
    } else {  
        column.setPreferredWidth(50);  
    }  
}
```

<http://docs.oracle.com/javase/tutorial/uiswing/examples/components/SimpleTableDemoProject/src/components/SimpleTableDemo.java>

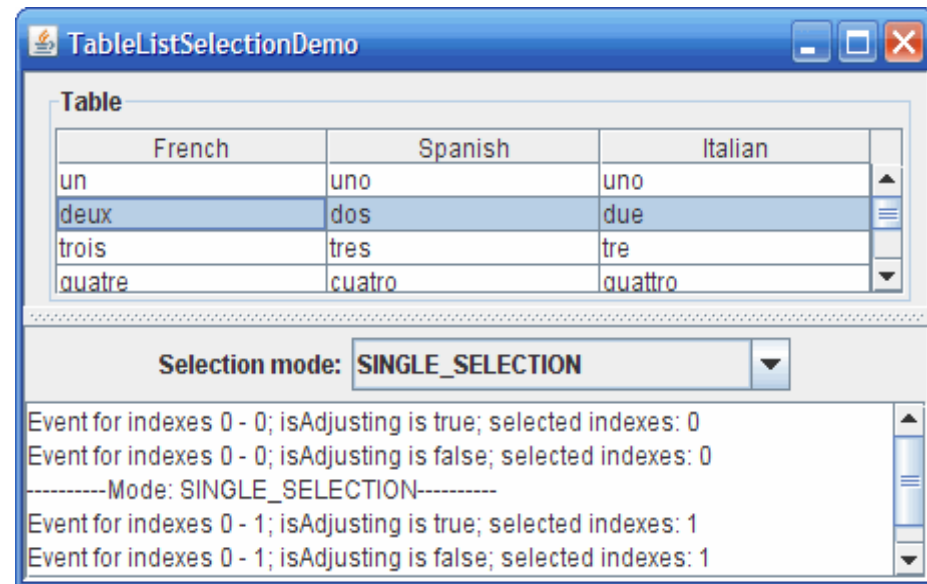

# JTable

## □ Selection 구현

```
class SharedListSelectionHandler implements ListSelectionListener {
    public void valueChanged(ListSelectionEvent e) {
        ListSelectionModel lsm = (ListSelectionModel)e.getSource();

        int firstIndex = e.getFirstIndex();
        int lastIndex = e.getLastIndex();
        boolean isAdjusting = e.getValueIsAdjusting();
        output.append("Event for indexes "
            + firstIndex + " - " + lastIndex
            + "; isAdjusting is " + isAdjusting
            + "; selected indexes:");

        if (lsm.isSelectionEmpty()) {
            output.append(" <none>");
        } else {
            // Find out which indexes are selected.
            int minIndex = lsm.getMinSelectionIndex();
            int maxIndex = lsm.getMaxSelectionIndex();
            for (int i = minIndex; i <= maxIndex; i++) {
                if (lsm.isSelectedIndex(i)) {
                    output.append(" " + i);
                }
            }
        }
        output.append(newline);
    }
}
```

# JTable

/\* DefaultTableModel을 구현하여 JTable을 생성한다. \*/

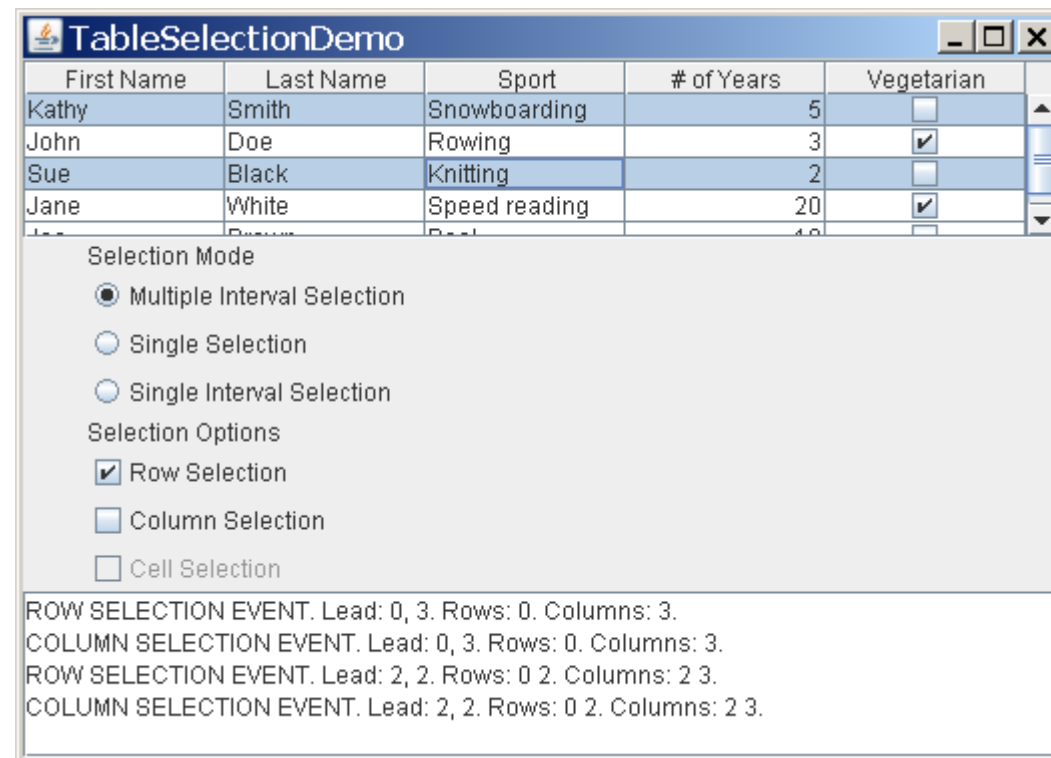

```
tablemodel = new DefaultTableModel();  
  
tablemodel.setColumnIdentifiers(new String[] {"이름", "나이", "성별"});  
  
table = new JTable(tablemodel);  
  
scroll = new JScrollPane(table);
```

```
public void actionPerformed(ActionEvent e) {  
  
    Object obj = e.getSource();  
  
    /* 추가 버튼이 눌린 경우 */  
  
    if((JButton)obj == btn1)  
    {  
  
        /* TextField에 입력된 데이터를 JTable에 삽입함 */  
  
        tablemodel.addRow(new String[] {txt1.getText().toString(),  
txt2.getText().toString(), txt3.getText().toString()});  
        txt1.setText(null);  
        txt2.setText(null);  
        txt3.setText(null);  
    }  
  
    /* 삭제 버튼이 눌린 경우 */  
  
    else if((JButton)obj == btn2)  
    {  
        /* 예외처리. 선택된 row가 있어야 한다 */  
        if(table.getSelectedRow() >= 0)  
        {  
            tablemodel.removeRow(table.getSelectedRow());  
        }  
    }  
}
```
